

Bio-Safe™ Skin Protectant Provides Self Defense For Skin

A new product by Eclectic Products, Inc, is designed to help shield workers against infectious bacteria and harsh chemicals that can damage the skin by causing contact dermatitis and dangerous cross contamination.

Patented Polymer Self Defense For Your Skin

Bio-Safe Skin Protectant is a patented polymer formula that protects, heals and nourishes skin for up to 4 hours. It will not wash or rub off, even from repeated hand washing. Bio-Safe Skin Protectant is not a hand sanitizer. Sanitizers are designed to temporarily kill germs already on the skin—sanitizers do not prevent contamination or re-contamination.

Helps Prevent Contamination

Bio-Safe Skin Protectant lotion actually helps prevent contamination and skin absorption of most harsh chemicals and toxic and odorous compounds by forming an invisible electrochemical bond to the outer epithelial layer of the skin. Bio-Safe may be applied to hands, neck, forearms, legs—any area exposed to contaminants.

Effective Against Costly Contact Dermatitis

Bio-Safe has been proven very effective against contact dermatitis - a stubborn, elusive and destructive condition for workers in many occupations. Dermatitis accounts for 40% of all occupational illness and costs more than a billion dollars yearly in medical and disability payments, lost productivity and time. (Journal of American Dermatology)

An Invisible, Nourishing Protective Net

If hands are chapped, cracked and dry from the work environment, Bio-Safe hastens healing and rehabilitates the affected skin. The Vitamin E and Glycerin-enriched lotion dries to an invisible, nourishing, protective “net” that allows skin to breathe and perspire while retaining its own natural moisture—even under gloves and other personal protection equipment.

The Backup Plan Workers Can Trust

Bio-Safe is not a replacement for personal protection equipment. However, gloves can tear or wear through, exposing skin to irritants. Bio-Safe works under gloves, where its protective polymer is the first line of defense against water and harsh chemicals while preserving the skin's health. In addition, Bio-Safe Skin Protectant is the backup plan workers can trust if they are exposed to contamination before they can get gloves or face shields in place.

Safe To Use

Bio-Safe is hypoallergenic. Clinical tests have shown the product to be non-sensitizing, orally non-toxic and non-irritating to eyes. Ingredients are classified as GRASE (Generally Regarded as Safe & Effective). Bio-Safe contains no scenting agents and no ethyl alcohol and does not transfer. Bio-Safe Skin Protectant is manufactured and tested in FDA-registered labs.

Dispensing Options For Bio-Safe Skin Protectant

Locking stainless steel dispensers deliver a pre-measured amount and contain over 1000 applications. Also available in a variety of sizes ranging from handy flip-top 1, 2, 4 and 8 oz. sizes for pockets, desk, or vehicle, and a 1 liter size with pump.

Also try Bio-Safe Hand Sanitizer for a quick clean-up when water is not available.
